

KGA_Toolbox-Content

Group	Sub-Group	Tool Name	Description	No
Data Creation		Create Point Layer	Create a point layer	1.
		Create Line Layer	Create a line layer	2.
		Create Polygon Layer	Create a polygon layer	3.
		Create LMAM	Create a polygon layer using standard field format required by MLMUPC	4.
	Raster-Vector	Feature To Raster	Convert vector feature to raster format for analysis and visualization	5.
		Raster To Polygon	Convert raster data to polygon feature for vector analysis	6.
	Conversion Tool	Point To Polygon	Convert point feature to polygon feature	7.
		Line To Polygon	Convert polygon features by line features by creating polygon from closed line	8.
		Polygon To Center Point	Convert polygon features to their central point features	9.
		Polygon To Line (Multiple)	Convert polygon features to line features	10.
		Polygon To Boundary Point	Create boundary point from polygon features by using their vertices	11.
		Polygon To Map Series	Convert polygon features to point and line features for map series creation	12.
		Layer To KML	Convert GIS layers to KML format for using in Google Earth Pro or other application	13.
		KML To Layer	Convert KML files to GIS layers for analysis and visualization	14.
		Feature Class To GPX	Convert feature classes to GPX format for using in GPS device and other application	15.
		GPX To Feature Class	Convert GPX file to GIS layers for analysis and visualization	16.
	Quick Template	Polygon Layer	Quick generate polygon features based on predefined template	17.
		Line Layer	Quick generate line features based on predefined template	18.
		Point Layer	Quick generate point features based on predefined template	19.
		Add Bassmap	Add google satellite layer or other satellite layer sources.	20.
		Clip Basemap By Boundary	Clip Basemap based on specific boundary layer	21.
		Generate Boundary Point	Quickly generate boundary points based on a predefined template	22.

Data Manage ment		<i>Generate Boundary Line</i>	Quickly generate boundary lines based on a predefined template	23.
		<i>Generate Polygon Center Point</i>	Quickly generate center points based on a predefined template	24.
		<i>Copy Feature</i>	Quickly copy features from one layer to another based on a predefined template	25.
	Attribute	<i>Fields</i>	Open a view of the fields in the layer	26.
		<i>New Field</i>	Create a new field in this table	27.
		<i>Attribute Rules</i>	Open a view of the attribute rules in the layer	28.
		<i>Continent Values</i>	Open a view of the continent values in the layer	29.
		<i>Domains</i>	Open a view of the domains in the layer	30.
		<i>Subtypes</i>	Open a view of the subtypes in the layer	31.
		<i>Bath Add Field</i>	Add field to multiple feature classes or table at once	32.
		<i>Select To Enter Value</i>	Quickly assign a value to a chosen field for selected records	33.
	Export Table	<i>Export Features</i>	Convert a shapefile or geodatabase feature classes to shapefile or geodatabase feature classes.	34.
		<i>Export Table</i>	Export current table to new table	35.
		<i>ID-Based CSV Exporter</i>	Export attribute tables to separate CSV files based on ID field	36.
		<i>Boundary XY to excel</i>	Generate coordinates for parcel boundary points and open immediately in Microsoft excel	37.
	Query Features	<i>Build Definition Query</i>	Enter a definition query expression to display only a subset of features in the layer or table	38.
		<i>Generate Definition Query from selection</i>	Create a definition query from the selected features or rows of the layer or table	39.
	Symbology	<i>Symbology</i>	Show symbology for the selected layer	40.
		<i>Expression</i>	Set the label expression for the current label class	41.
	Create/Open	<i>New Map</i>	Create a new map for displaying data on two dimension	42.
		<i>New Global Scene</i>	Create a new global scene for displaying three dimensional data	43.
		<i>New Local Scene</i>	Create a new local scene for displaying three dimension data	44.
		<i>Content</i>	Show the content pane	45.
		<i>Catalog Pane</i>	Show catalog pane	46.
		<i>Geoprocessing</i>	Show geoprocessing pane	47.

	Calculation	<i>Model Builder</i>	Create a new blank geoprocessing model and open it in Model builder	48.
		<i>Calculate Field</i>	Calculate values or a field in a table or feature classes	49.
		<i>Calculate Geometry</i>	Calculate geometric properties such as area, length, or coordinates for features	50.
	Quick Label	<i>Show Area</i>	Display the area of polygon features as label on the map	51.
		<i>Show Length</i>	Display the length of line features as label on the map	52.
		<i>Label Control</i>	Provide control over label visibility and placement for features on the map	53.
Maps		<i>To Google Map</i>	Open the current map view in Google Maps for web-based visualization and sharing	54.
		<i>To Google Earth Pro</i>	Open the current map view in Google Earth Pro for advanced 3D visualization and analysis	55.
		<i>To Google Earth Wen</i>	Open the current map view in Google Earth for 3D visualization and exploration	56.
		<i>To Google Street Map</i>	Open the current map view in Open Street Map for web-based visualization and sharing	57.
		<i>To Ling Atlas</i>	Open ArcGIS Living Atlas or access to vast collection of authoritative maps and data	58.
		<i>To KGA-Geodigitizer</i>	Open the KGA-geodigitizer website for quickly digitized that data	59.
Necessar y Tool	Create	<i>Create Features</i>	Show the create features pane. This allows you to create new features in the current map suing template	60.
	Modify	<i>Move</i>	Move the selected features	61.
		<i>Edit Vertices</i>	Add, Move, or Delete Vertices and segments for the selected feature	62.
		<i>Reshape</i>	Reshape an existing line or polygon feature by drawing the new shape	63.
		<i>Merge</i>	Merge two or more features into an existing features into a new feature	64.
		<i>Split</i>	Split Polyline or polygon features interactively by drawing a cutting line	65.
		<i>Divide</i>	Divide lines or polygon features	66.
		<i>Copy Parallel</i>	Create parallel offset copies of selected line features	67.
		<i>Sequential Numbering</i>	Sequentially number points, lines, or polygons along a sketch.	68.
		<i>Extend or Trim</i>	Extend or Trim polyline features and terminate them where they touch another feature	69.
		<i>Line Intersection</i>	Split lines where they intersect	70.
		<i>Clip</i>	Clip all features or selected target features that touch or are within a buffered distance from selected features	71.
		<i>Buffer</i>	Buffer transverses each of the input feature's vertices and create buffer offsets	72.
		<i>Split Into CoGo Lines</i>	Split selected line features at each vertices.	73.

		<i>Planarize</i>	Split selected line features where they intersect.	74.
		<i>Construct Polygon</i>	Create new polygons from the shapes of selected features	75.
	Edit Table	<i>Edit table</i>	Open the attribute table of the selected layer for editing and analysis	76.
		<i>Edit in Excel</i>	Export the selected feature layer's attribute table to excel for editing	77.
		<i>Apply Excel Edits</i>	Read the modified excel file and push change back to the original feature class attribute	78.
		<i>Excel Setting</i>	Configure export options, temp directory, and validation rules	79.
		<i>Explore</i>	View pop up and pan, Zoom rotate/tilt (3D-only), Continuous	80.
		<i>Select</i>	Select features visible on map	81.
		<i>Clear</i>	Deselect all currently selected features	82.
		<i>Snapping</i>	Turn snapping on or off for interactive tools	83.
		<i>Attributes</i>	Show the attributes pane.	84.
		<i>Measure distance</i>	Draw a line to measure the straight line distance between two or more points	85.
		<i>Save</i>	Save all edit made since the last save	86.
		<i>Discard Edits</i>	Discard all unsaved edits	87.
		<i>Delete</i>	Delete the selected features	88.
Geoprocessing	Vector Tool	<i>Clip</i>	Clip features from one layer using the features of another layer as the clipping boundary	89.
		<i>Merge</i>	Merge multiple datasets into a single dataset	90.
		<i>Intersect</i>	Find common areas and create a new layer with intersected features	91.
		<i>Dissolve</i>	Dissolve features based on specified attributes to create simplified geometries	92.
		<i>Buffer</i>	Create buffer zones around input features at a specified distance	93.
		<i>Erase</i>	Erase portions of features that overlap with features from another layer	94.
		<i>Union</i>	Combine features from multiple layers into a single layer, preserving all geometries	95.
		<i>Append</i>	Append features from one or more layers to an existing layer	96.
	Raster Tool	<i>Clip Raster</i>	Clip raster data using a specified boundary	97.
		<i>Extract By Mask</i>	Extract raster by cell that fall within the area defined by mask layer	98.
		<i>Build Raster Attribute</i>	Build or update raster attribute table for categorical raster datasets	99.

		<i>Raster Calculator</i>	Perform map algebra operations on raster datasets using a calculator interface	100.
		<i>Hillshade</i>	Create a hillshade raster from a digital elevation model (DEM) to visualize terrain	101.
		<i>Slope</i>	Calculate the slope of the terrain from a digital elevation model (DEM)	102.
		<i>Contour</i>	Generate contour lines from a digital elevation model (DEM)	103.
	Coverage	<i>Clip Multiple</i>	Clip multiple features classes by a single feature class	104.
		<i>Multi Ring Buffer</i>	Create multiple ring buffers around input features	105.
		<i>Percentage Coverage</i>	Calculate the percentage of coverage of one or more layers over another	106.
		<i>Create Thiessen Polygon</i>	Create thiessen (Voronoi) polygons from input point features	107.
	CRS	<i>Indian <-> WGS84 Convector</i>	Convert coordinates between indian UTM and WGS84 geographic coordinate systems	108.
		<i>Project Vector</i>	Project vector data from current coordinate system to a different coordinate system	109.
		<i>Project Raster</i>	Project raster data from current coordinate system to a different coordinate system	110.
		<i>Define Projection</i>	Change the spatial reference of the data source	111.
		<i>Create Geographic Transform</i>	Create geographic transformations between different datums	112.
	Trim Parcel	<i>Trim Parcel Using Buffer Method</i>	Trim parcel boundaries to the road edge by removing any overlapping portions using buffer method	113.
		<i>Trim Parcel Using Parallel Method</i>	Trim parcel boundaries to align with road edges using parallel method	114.
	Cadastral Tools	<i>Automatic Parcel Subdivision Optimizer</i>	Optimize parcel subdivisions automatically based on specified criteria	115.
		<i>Parcel Subdivision</i>	Facilitate the subdivision of parcels based on specified criteria and constraint	116.
		<i>Parcel Data Cleaning</i>	Perform data cleaning on parcel datasets to ensure accuracy and consistency	117.
		<i>Parcel Triangulation</i>	Generate triangulation lines for parcels to analyze spatial relationships and support subdivision	118.
		<i>Parcel Bearing and Distance Calculator</i>	Calculate bearing and distances for parcel boundaries	119.
		<i>Parcel Boundary Conflict Detector</i>	Detect conflicts in parcel boundaries to ensure data integrity	120.
		<i>Parcel Boundary Legal Description Generator</i>	Generate legal descriptions for parcel boundaries based on spatial data	121.
		<i>Parcel Boundary Line Generator</i>	Generate parcel boundary lined from land parcel polygon data	122.
		<i>Parcel Coordinate Listing Tool</i>	Generate a listing of parcel coordinate from land parcel polygon	123.
		<i>Parcel Corner Point Generator</i>	Generate corner point for parcels from land parcel polygon data	124.

		<i>Parcel Direction Analyzer</i>	Analyze the direction of parcel boundaries to identify orientation patterns	125.
		<i>Parcel Minimum Width Analyzer</i>	Analyze the minimum width of parcel to ensure compliance with regulations	126.
		<i>Parcel Network Graph Builder</i>	Build a network graphic of parcels to analyze spatial relationships and connectivity	127.
		<i>Parcel Shape Quality Checker</i>	Check the quality of parcel shapes to identify issue such as sliver polygons or irregular geometries	128.
	Topology Check	<i>Font Converter</i>	Convert text between different Khmer font encoding to ensure compatibility	129.
		<i>Topology Checker</i>	Perform topology checks on spatial data to ensure topological integrity	130.
		<i>Overlap Checker</i>	Check for overlapping parcels in the dataset to maintain data integrity	131.
		<i>Add Feature Class To Topology</i>	Add feature classes to an existing topology for validation	132.
		<i>Boundary Overlap</i>	Check for overlapping boundaries in the dataset to maintain data integrity	133.
		<i>Point On Boundary</i>	Identify points that lie on the boundaries of features	134.
	Parcel Validation	<i>Parcel Field Format</i>	Validate and standardize parcel field formats according to specifications	135.
		<i>Parcel Number Analyzer</i>	Analyze parcel numbers for patterns and inconsistencies	136.
		<i>Duplicate Number Finder</i>	Identify and locate duplicate parcel numbers within the dataset	137.
		<i>Count Feature</i>	Count the number of features of input layers	138.
Spatial Analysis		<i>Cut Fill Tool</i>	Analyze terrain changes by calculating cut and fill volume between surfaces	139.
	Profile	<i>Elevation Profile From Line Path</i>	Generate elevation profiles along specified lines from a digital elevation model (DEM)	140.
		<i>Elevation Profile From Point Path</i>	Generate elevation profiles along specified point path containing elevation field	141.
		<i>Spot Height Tool</i>	Extract spot height from a digital elevation model (DEM)	142.
		<i>Point To Point Direction and Distance</i>	Calculate direction and distance between pairs of points	143.
Mapping		<i>Parcel Division</i>	Facilitate the division of parcels using a standardized form	144.
	Quick Landplot	<i>Quick Landplot1 (form2)</i>	Quick generate land plots based on input CSV table, point, line, or polygon	145.
		<i>Quick Landplot2 (form2)</i>	Quick generate land plots based on input CSV table, point, line, or polygon	146.
